

DIGAMBAR RAJARAM

DevOps & Infrastructure Engineer

Phone: +91-7353570952 | Email: digambarrajaram2@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

DevOps & Infrastructure Engineer with 2+ years of enterprise production experience at Protean eGov Technologies, supporting India's largest government platforms (NPS, PAN, TIN, CRA, eSign). Combines deep enterprise infrastructure operations — VMware, Commvault, ITIL — with hands-on cloud-native engineering across AWS, Terraform, Kubernetes, CI/CD, and observability.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, S3, IAM, VPC, Lambda, API Gateway, EKS, CloudWatch, ALB/NLB, Route 53, Cloud Front), Terraform (Infrastructure as Code), Jenkins, GitHub Actions, Docker, Kubernetes (Helm), Ansible; Agile/Scrum SDLC; experience across cloud service models (IaaS, PaaS, SaaS); workflow automation with N8N.

Infrastructure & Virtualization: VMware vSphere, ESXi, vCenter, HA/DRS, vMotion, vRealize Operations (vROps), Capacity Planning & Performance Optimization.

Operating Systems: Windows Server 2016/2019/2022, Linux (Ubuntu, Redhat Linux), OS Hardening & Patch Management.

Backup & Disaster Recovery: Commvault (10+ PB Enterprise Backup Infrastructure), Disaster Recovery Automation, RPO/RTO Validation.

Monitoring & Scripting: Amazon CloudWatch, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana, Filebeat, ElastAlert2); Python, Shell Scripting; Java Spring Boot; AI-assisted development with GitHub Copilot, Claude, and Ollama (local LLMs).

Networking Concepts: TCP/IP networking (IPv4/IPv6, subnetting/Subnet, CIDR, Route Table, routing); DNS, DHCP; OSI model; AWS networking constructs (VPC, ENI, Security Groups, NACLs).

PROFESSIONAL EXPERIENCE

Assistant Manager – DevOps & Infrastructure | Protean eGov Technologies Ltd, Mumbai, Maharashtra, India. Mar 2023 – Jun 2025

- **Maintained 99.9%+ uptime** across 1500+ VMs spanning production and DR environments on a clustered VMware vSphere architecture (100+ ESXi hosts), directly supporting mission-critical government financial services.
- **Reduced unplanned downtime by ~40%** through proactive performance monitoring using vROps analytics — tracking CPU Ready, memory contention, and storage latency across the entire fleet.
- **Executed zero-downtime ESXi lifecycle upgrades** and firmware validation cycles across 100+ hosts, coordinating with CAB and maintaining patch compliance with no production impact.
- Managed provisioning, monthly patch cycles (100% compliance), and security hardening for 1500+ Windows Server (2016/2019/2022) and Linux VMs supporting enterprise workloads.
- **Administered 10+ PB enterprise backup environment using Commvault** — the backbone of disaster recovery for one of India's largest government fintech platforms.
- **Automated Disaster Recovery failover using Ansible**, reducing manual DR drill time by 60% and achieving consistent RPO/RTO targets during quarterly audits.
- **Promoted to Assistant Manager (Sep 2023)** — within 6 months of joining — based on demonstrated operational ownership and team leadership.
- Led daily operations of a 6-member infrastructure team; served as escalation point for P1/P2 incidents and conducted structured Root Cause Analysis (RCA) for all major events.
- Participated in CAB meetings and enforced ITIL-aligned change management processes, reducing change-related incidents by standardizing pre-change checklists.

- Built an internal infrastructure asset management platform using Spring Boot, MySQL, and ReactJS to replace manual spreadsheet tracking of 1500+ hardware/software assets.
- Reduced audit preparation time by ~50% — platform provided real-time inventory visibility that was previously unavailable during compliance reviews.

DEVOPS & CLOUD PROJECTS

ELK Stack – Centralized Log Aggregation & Observability Platform (AWS + Terraform)

- Provisioned a production-style ELK Stack on **AWS EC2 using Terraform** (IaC end-to-end) with Docker Compose for Elasticsearch, Logstash, Kibana, and Filebeat.
- Built **multi-source Logstash ingestion pipelines** with Grok filters to parse and enrich Nginx access logs, application logs, and OS syslog before indexing into Elasticsearch 8.x.
- Designed **Kibana dashboards** for real-time infrastructure health, Nginx request analytics, and error-rate tracking across services.
- Implemented **ElastAlert2 detection rules** for anomaly detection (high error rate, SSH brute force, CPU spikes) with Slack/email alerting — achieving sub-5-minute MTTD.
- Hardened the cluster with **X-Pack TLS, RBAC, and Index Lifecycle Management (ILM)** policies to enforce security and manage storage costs at scale.

AI-Driven DevOps Incident Management Platform (AWS)

- Built production-style AWS infrastructure using **Terraform** (IaC) with a simulated DevOps Agent workflow evaluating **CloudWatch** logs/metrics; correlated CI/CD deployment history for automated incident assessment with **GitHub Actions** (OIDC auth).
- Performed **failure injection testing** to validate incident detection and response behaviour across AWS services.

AWS Networking, Auto Scaling & EKS Production Architecture

- Provisioned **multi-AZ VPC architecture** using Terraform with ALB, Auto Scaling Groups, and NAT Gateways for high availability.
- Configured remote backend using **S3 + DynamoDB state locking**; enforced IMDSv2, KMS encryption, and least-privilege IAM practices.
- Provisioned **EKS cluster** with managed node groups using Terraform; implemented **IRSA with OIDC** for pod-level IAM access control and **AWS Load Balancer Controller** for production-grade ingress routing.

Enterprise DevOps CI/CD Pipeline – Jenkins, Maven, Docker & Ansible

- Designed and implemented enterprise-grade **CI/CD pipeline** for Java web application.
- Integrated **GitHub → Jenkins pipeline automation** for build triggers.
- Configured **Maven build lifecycle (compile, test, package WAR)**.
- Built optimized Docker images using **multi-stage builds**.
- Automated deployment using **Ansible playbooks**.

TRAINING & UPSKILLING

- Advanced Cloud Computing & DevOps Certification from Learnbay, in collaboration with Microsoft
- AI Engineer MLOps Track – Deploy GenAI & Agentic AI at Scale (Udemy)
- VMware vSphere ESXi & vCenter Administration (Udemy)
- Java Full Stack Development – TalentSprint / Q-J Spiders

EDUCATION

Bachelor of Engineering (BE) - Computer Science and Engineering

VSM's S.R. Kothiwale Institute of Technology, Nipani, Belagavi | **Sep 2018 – Jul 2022**
